

NOTICE OF HERBICIDE APPLICATION

WEDNESDAY, JULY 6, 2022

Ark Ecological Services will conduct an herbicide application at Roxborough Village on Wednesday, July 6, 2022, weather permitting.

The post-emergent herbicides Transline (Signal Word: Caution), Imazapic (Signal Word: Caution) and Weedar (Signal Word: Caution) will be used to control broadleaf weeds after they have emerged. For areas dominated by Kochia, a combination of a low rate of Vanquish (Signal Word: Caution), and regular rates of Weedar (Signal Word: Danger), Imazapic (Signal Word: Caution), and Vista (Signal Word: Warning) will be used. Weeds we have been seeing include Redstem Filaree, Poison Hemlock, Dandelions, Canada Thistle, Musk Thistle, Scotch Thistle, Dalmatian Toadflax, Alfalfa, Canada Thistle, Common Mallow, Kochia, and a few others. The focus will be the upland areas of Chatfield Farms and Roxborough Village. Riparian areas in Roxb. may also be sprayed with Milestone (Signal Word: Caution) and Weedar (Signal Word: Danger).

Herbicides will be marked with a blue dye. Yellow "Pesticide Warning" flags will be posted at major entrances into the open space, along trails, and at key locations to let adjacent property owners and others know about the herbicide applications. Flags have the date sprayed, the herbicides sprayed, and the signal word posted on the back of the flag. Please stay out of sprayed areas until dry - usually about 15 -30 minutes.

Thank you,

Ark Ecological Services, LLC
